

MyLakeshore Access

Restore Access by Clearing Browser Cache

Starting sometime on Saturday 10/17, access to MyLakeshore from the link on the Lakeshore public website stopped working in certain instances and generated an error for students, faculty, and staff when logging in was attempted.

This was caused by a vendor-initiated change to the MyLakeshore destination URL. Lakeshore College has updated that link on the website.

However, because browsers by default cache data to make webpages and logins faster, you may need to clear your browser's cache.

Doing so will force your browser to update the new MyLakeshore which will allow you to successfully login.

The following links will help guide you through clearing cache of the commonly used browsers:

- [Chrome](#)
- [Edge](#)
- [Safari](#)
- [Firefox](#)

If you use a browser not linked here, you can do a search using Google, Yahoo, etc. for "clear cache for <web browser>".

We appreciate your patience as we continue to resolve the issue.
